2018 Survey of Dental Fees Methodology

In accordance with a directive from the 1976 House of Delegates, the Health Policy Institute is responsible for periodically gathering and disseminating information regarding dental fees in the United States. The American Dental Association's (ADA) survey of fees charged by general practitioners and specialists is limited to the publication of statistics gathered from a nationwide random sample of dentists, who were asked to record the fee most often charged for each of 269 different dental procedures. **The survey data should not be interpreted as constituting a fee schedule in any way, and should not be used for that purpose. Dentists must establish their own fees based on their individual practice and market considerations.**

The procedure codes on the 2018 *Survey of Dental Fees* survey instrument and presented in the tables of this report were taken from *CDT 2018*, the reference manual published by the ADA. The previous *Survey of Dental Fees* used codes based on the 2016 edition of the manual; therefore, care should be taken when comparing data in this report with data from previous ADA *Surveys of Dental Fees* or reports from other sources. *CDT 2018* contains numerous updates and modifications to procedure codes, descriptors and common dental terms.

In this report, data for general practitioners are presented separately for each of the nine U.S. Census Divisions and for the nation as a whole. Following the general practitioner data, national statistics are presented for six dental specialties. The sample design used to select specialists did not provide a sufficient number of specialists to allow for analysis by specialty at the divisional level. Statistics presented for each procedure include the number of respondents, average, standard deviation and percentiles. The Glossary (separate page) includes definitions of these statistics, all of which help indicate how fee answers varied for a given procedure in our survey. To ensure statistical validity, at least 30 responses must have been received for each reported procedure. In both the general practitioner and specialty sections, only those procedures that received 30 or more responses are included in this report.

Sampling

The 2018 *Survey of Dental Fees* sample was selected from the ADA's national sampling frame of active private practitioners ("the population"), which includes member and non-member dentists. The sample, representing 11.2% of the population, was a simple random probability sample of 15,000 dentists in private practice, of whom approximately 60% were general practitioners and 40% were specialists. General practitioners from the New England and East South Central divisions were also oversampled to ensure a sufficient number of responses.

Representativeness was determined by checking for statistically significant differences between the sample and population on the following demographic characteristics using chi-square statistics and T-tests: division, primary occupation, secondary occupation, specialty, race, ownership status, age, and graduation year. No statistically significant differences were found between any of the subsamples of general practitioners and specialists and their populations.

Data collection

The 2018 *Survey of Dental Fees* was initially mailed to 15,000 dentists in private practice in January 2018, and two follow-up mailings to non-respondents were sent in March and May. Data collection was concluded in July 2018 after responses had been received from 1,668 dentists. The final adjusted response rate of 11.6% excludes those individuals who were retired, not in private practice, deceased, or had unknown or foreign addresses.

Weighting

The proportion of dentists in the sample and among the respondents were inconsistent with the actual population. To be able to make statements about all private practitioners, all general practitioners, or all specialists, the proportion of general practitioners and specialists among the respondents had to match those of the dental population as a whole. If left unbalanced, the statistics presented for all dentists, all general practitioners, or all specialists would have been skewed and would not have been an accurate representation of the dental population being analyzed. In order to account for these inconsistencies, survey weights were developed using the Propensity Cell Method. This method uses logistic regression to determine which categories on dentists were under/over represented in the responses and assigns a weight to each respondent in order to match the actual population.

Glossary

AVERAGE

The arithmetic average of all fees reported by the respondents, obtained by taking the sum of all fees and dividing by the number of responses. It is possible that no dentist reported charging a fee that is exactly equal to the average value. If the distribution of fees is not symmetrical (that is, one half is not the mirror image of the other), the median is a better indicator of the typical fee charged than the average.

CHI-SQUARE STATISTICS

Chi-square statistics indicate, in the context of this report, whether the demographic characteristics of a random sample occur with a distribution similar to that of the population from which the sample is drawn.

DIVISIONS***Nine U.S. Census Divisions:***

New England:	Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont.
Middle Atlantic:	New Jersey, New York, and Pennsylvania.
East North Central:	Illinois, Indiana, Michigan, Ohio, and Wisconsin.
West North Central:	Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, and South Dakota.
South Atlantic:	Delaware, Florida, Georgia, Maryland, North Carolina, South Carolina, Virginia, Washington D.C., and West Virginia.
East South Central:	Alabama, Kentucky, Mississippi, and Tennessee.
West South Central:	Arkansas, Louisiana, Oklahoma, and Texas.
Mountain:	Arizona, Colorado, Idaho, Montana, Nevada, New Mexico, Utah, and Wyoming.
Pacific:	Alaska, California, Hawaii, Oregon, and Washington.

MEDIAN	A statistical measure that divides ranked numeric responses into halves. The median is the response that falls at the fifty percent mark. The responses in one half are all smaller than the median and those in the other half are all larger than the median.
PERCENTILE	A percentile represents a fee at which a certain percentage of dentists charge up to the value of that fee. Example: the 75th percentile describes the fee equal to or greater than 75% of the fees for a given procedure.
SIMPLE RANDOM PROBABILITY SAMPLE	A simple random probability sample denotes a sample in which names are drawn at random without replacement.
STANDARD DEVIATION (S.D.)	The typical deviation of sample values from the mean. The size of the standard deviation reflects the accuracy of the sample mean in representing the population. In a normal population, 68.0% of the observations fall within one standard deviation of the mean, 95.5% within two standard deviations, and 99.7% within three standard deviations.
T-TESTS	T-tests indicate, in the context of this report, whether the mean values of numeric demographic characteristics (age, year of graduation) of a random sample are statistically similar to those of the population from which the sample is drawn.

PLEASE READ THESE IMPORTANT INSTRUCTIONS BEFORE CONTINUING:

For the following procedures, **record your full fee—not the portion that you expect to receive or for which you might be reimbursed**. A full fee is the fee for a service that is set by the dentist, which reflects the costs of providing the procedure and the value of the dentist's professional judgment. A contractual relationship does not change the dentist's full fee. It is always appropriate to report the full fee for each service reported to a third-party payer.

- **Do not report a fee range.**
- Record a single fee for each service.
- If you provide certain services **without charge**, write **0 (zero)**.
- If you **do not perform** a certain procedure, **leave the corresponding space blank**.

Procedure codes from the most recent revision of the ADA's *Code on Dental Procedures and Nomenclature* are provided for your assistance in specifying services. All codes and nomenclature are published in the ADA's *CDT 2018: Dental Procedure Codes*.

Legal Disclaimer: This survey is taken in accordance with Statement 6 of the Federal Trade Commission's *Statements of Antitrust Enforcement Policy in HealthCare*. Dentists are reminded to avoid sharing fee or cost information with their competitors.
